

Better (Small) Scientific Software Teams

SIAM CSE

Atlanta, GA

February 28, 2017

Tutorial slides available at: <http://bit.ly/siam-cse17-mt3>

Michael A. Heroux, Sandia National Laboratories

Acknowledgments

2

- Sandia National Laboratories is a multi-program laboratory managed and operated by Sandia Corporation, a wholly owned subsidiary of Lockheed Martin Corporation, for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-AC04-94AL85000. SAND NO. 2016-8466 C.

Outline

3

- Introduction
- Small Team Models, Challenges.
- Agile workflow management for small teams
 - ▣ Intro to terminology and approaches
 - ▣ Overview of Kanban
 - ▣ Free tools: Trello, GitHub.
- Hands on: Issue tracking via Kanban in GitHub.

Objectives

4

- Productivity – Output per unit input.
- Sustainability – The future cost of usability.
- Goals for today:
 - ▣ Learn how to improve
 - Developer productivity.
 - Software sustainability.
 - ▣ For the purposes of better scientific productivity,
 - ▣ Using tools, processes and practices.

Tradeoffs: Better, faster, cheaper

5

- “Better, faster, cheaper: Pick two of the three.”
 - ▣ Scenario: (Today)

You are behind in developing a sophisticated new model in your software that you want to use for results in an upcoming paper.
 - ▣ Which of these could be reasonable choices?
 - Develop a simpler model for the paper.
 - Set other work aside and spend more time on development.
 - Ask for an extension on the paper deadline.
 - Develop sophisticated model, but don't test its correctness.
 - Develop sophisticated model, but don't document it or check it in.

Improved developer productivity

6

“Better, faster, cheaper: Pick all three.” – Near term.

Scenario: (6 months later)

After investing in **developer productivity improvements**, you are on time in developing a sophisticated new model in your software that you want to use for results in an upcoming paper.

Invest in developer tools, processes, practices.

Improved software sustainability

7

“Better, faster, cheaper: Pick all three.” – Long term.

Scenario: (3 years later)

After investing in **software sustainability improvements**, you are on time in developing **several** sophisticated new models in your software that you want to use for results in upcoming papers.

Invest in testing, documentation, integration for long-term software usability.

Small team interaction model

8

□ Team composition:

▣ Senior staff, faculty:

- Stable presence, in charge of science questions, experiments.
- Know the conceptual models well.
- Spend less time writing code, fuzzy on details.

▣ Junior staff, students:

- Transient, dual focus (science results, next position).
- Staged experience: New, experienced, departing.
- Learning conceptual models.
- Write most code, know details.

Small team challenges

9

- Ramping up new junior members:
 - ▣ Background.
 - ▣ Conceptual models.
 - ▣ Software practices, processes, tools.
- Preparing for departure of experienced juniors.
 - ▣ Doing today those things needed for retaining work value.
 - ▣ Managing dual focus.

Large team challenges

10

- Composed of small teams (and all the challenges).
- Additional interaction challenges.

Managing issues:

Fundamental software process

Continual improvement

- Issue: Bug report, feature request
- Approaches:
 - ▣ Short-term memory, office notepad
 - ▣ ToDo.txt on computer desktop (1 person)
 - ▣ Issues.txt in repository root (small co-located team)
 - ▣ ...
 - ▣ Web-based tool + Kanban (distributed, larger team)
 - ▣ Web-based tool + Scrum (full-time dev team)
- IDEAS project:
 - ▣ Jira Agile + Confluence: Turnkey web platform (ACME too)
 - ▣ Kanban: Simplest of widely known Agile SW dev processes

Informal, less
training

Formal, more
training

Kanban principles

12

- Limit number of “In Progress” tasks
- Productivity improvement:
 - ▣ Optimize “flexibility vs swap overhead” balance. No overcommitting.
 - ▣ Productivity weakness exposed as bottleneck. Team must identify and fix the bottleneck.
 - ▣ Effective in R&D setting. Avoids a deadline-based approach. Deadlines are dealt with in a different way.
- Provides a board for viewing and managing issues

Basic kanban

13

Backlog	Ready	In Progress	Done
<ul style="list-style-type: none">Any task ideaTrim occasionallySource for other columns	<ul style="list-style-type: none">Task + description of how to do it.Could be pulled when slot opens.Typically comes from backlog.	<ul style="list-style-type: none">Task you are working on <i>right now</i>.The only kanban rule: Can have only so many “In Progress” tasks.Limit is based on experience, calibration.Key: Work is <i>pulled</i>. You are in charge!	<ul style="list-style-type: none">Completed tasks.Record of your life activities.Rate of completion is your “velocity”.

Notes:

- Ready column is not strictly required.
- Other common column: In Review
- Can be creative with columns:
 - Waiting on Advisor Confirmation.

Personal kanban

14

- Personal kanban: Kanban applied to one person.
 - ▣ Apply kanban principles to your life.
 - ▣ Fully adaptable.

- Personal kanban: Commercial book/website.
 - ▣ Useful, but not necessary.

SIAM CSE17, Feb 2017

Kanban tools

15

- Wall, whiteboard, blackboard: Basic approach.
- Software, cloud-based:
 - ▣ Trello, JIRA, GitHub Issues.
 - ▣ Many more.
- I use Trello (browser, iPhone, iPad).
 - ▣ Can add, view, update, anytime, anywhere.

Big question: How many tasks?

16

- Personal question.
- Approach: Start with 2 or 3. See how it goes.
- Use a freeway traffic analogy:
 - ▣ Does traffic flow best when fully packed? No.
 - ▣ Same thing with your effectiveness.
- Spend time consulting board regularly.
 - ▣ Brings focus.
 - ▣ Enables reflection, retrospection.
- Use slack time effectively.

Importance of “In Progress” concept for you

17

- Junior community members:
 - ▣ Less control over task.
 - ▣ Given by supervisor.
- In Progress column: Protects you.
 - ▣ If asked to take on another task, respond:
 - Is this important enough to become less efficient?
 - Sometimes it is.

Project: Atlanta

18

- Four tasks:
 - ▣ Define requirements.
 - ▣ Develop design document.
 - ▣ Write test driver.
 - ▣ Write source code to make test pass.
- Notes:
 - ▣ You will have many tasks in a real project.
 - ▣ Tasks are called issues in GitHub.
 - ▣ Good reference: The Agile Samurai

Hands on issue tracking: Go to Github

19

- Goal: Learn how to set up communication in GitHub:
 - ▣ Pre-steps: Set up a repository, communication paths.
 - ▣ Create:
 - Issues – Any task you want to accomplish.
 - Labels – Categories for grouping issues by type.
 - Milestones – Groups of issues for tracking progress.
 - Projects – Kanban board for tracking progress.

Hands on issue tracking: Go to Github

20

- <https://github.com/>
- Create new (public) repository called atlanta.
- Add collaborators (pick your neighbor).
 - ▣ Settings -> Collaborators
 - ▣ Type Github ID (not email address).
- Set up a Google Groups email address.
 - ▣ groups.google.com
 - ▣ Email address: project-name@googlegroups.com
- Add email notification:
 - ▣ Settings -> Integrations & Services -> Add service -> Email
 - ▣ Type in address, no Secret needed, uncheck "Send from author"

Adopt new approach: How to decide

21

- Decision tree

(Personal) Productivity++ Initiative

Ask: *Is My Work* _____ ?

Productivity++

Traceable

In Progress

Sustainable

Improved

The Agile Samurai: How Agile Masters Deliver Great Software (Pragmatic Programmers), Jonathan Rasmusson. Excellent, readable book on Agile methodologies. <https://www.amazon.com/Agile-Samurai-Software-Pragmatic-Programmers/dp/1934356581>

Code Complete, Steve McConnell. Excellent testing advice. His description of Structure Basis Testing is good, and it is a simple concept: Write one test for each logic path through your code.
