- Requested citation: David E. Bernholdt and Michael A. Heroux, Better (Small) Scientific Software Teams, in Better Scientific Software tutorial, Exascale Computing Project Annual Meeting, Houston, Texas, 2019. DOI: 10.6084/m9.figshare.7581746

Acknowledgements

- This work was supported by the U.S. Department of Energy Office of Science, Office of Advanced Scientific Computing Research (ASCR), and by the Exascale Computing Project (17-SC-20-SC), a collaborative effort of the U.S. Department of Energy Office of Science and the National Nuclear Security Administration.
- This work was performed in part at the Oak Ridge National Laboratory, which is managed by UT-Battelle, LLC for the U.S. Department of Energy under Contract No. DE-AC05-00OR22725.
- Sandia National Laboratories is a multimission laboratory managed and operated by National Technology and Engineering Solutions of Sandia, LLC, a wholly owned subsidiary of Honeywell International, Inc., for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-NA0003525.

Outline

- Small Team Models, Challenges.
- Agile workflow management for small teams
 - Intro to terminology and approaches
 - Overview of Kanban
 - Free tools: Trello, GitHub.
- Hands-on example of project management using GitHub

Small Teams

Ideas for managing transitions and steady work.

Small team interaction model

Team composition:

- Senior staff, faculty:
 - Stable presence, in charge of science questions, experiments.
 - Know the conceptual models well.
 - Spend less time writing code, fuzzy on details.
- Junior staff, students:
 - Transient, dual focus (science results, next position).
 - Staged experience: New, experienced, departing.
 - Learning conceptual models.
 - Write most code, know details.

Large team challenges

- Composed of small teams (and all the challenges).
- Additional interaction challenges.
- Policies, regularly cultural exchanges important.

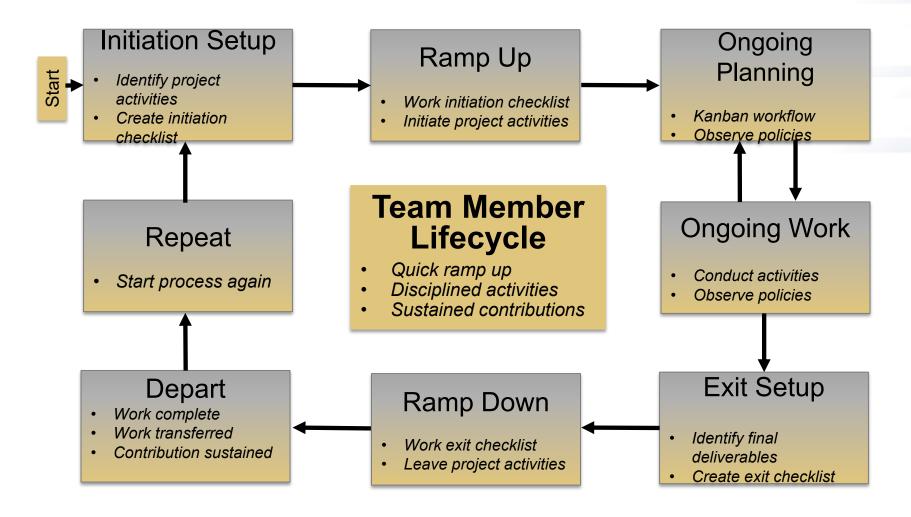

Small team challenges

- Ramping up new junior members:
 - Background.
 - Conceptual models.
 - Software practices, processes, tools.
- Preparing for departure of experienced juniors.
 - Doing today those things needed for retaining work value.
 - Managing dual focus.

Research Team Member Lifecycle

Checklists & Policies

Team Member Phase				
New Team Member	Steady Contributor	Departing Member		
Checklist	Policies	Checklist		

- New, departing team member checklists:
 - Example: Trilinos New Developer Checklist.
 - https://software.sandia.gov/trilinos/developer/sqp/checklists/index.html
- Steady state: Policy-driven.
 - Example: xSDK Community policies.
 - https://xsdk.info/policies/

Your checklists & policies?

- Checklist: New team member?
- Policies: Ongoing work?
- Checklist: Before someone departs?

Collaborative Work Management

Managing with Kanban

Managing issues: Fundamental software process

Continual improvement

- Issue: Bug report, feature request
- Approaches:
 - Short-term memory, office notepad
 - ToDo.txt on computer desktop (1 person)
 - Issues.txt in repository root (small co-located team)
 - **—** ...
 - Web-based tool + Kanban (distributed, larger team)
 - Web-based tool + Scrum (full-time dev team)

Informal, less training

Formal, more training

Kanban principles

- Limit number of "In Progress" tasks
- Productivity improvement:
 - Optimize "flexibility vs swap overhead" balance. No overcommitting.
 - Productivity weakness exposed as bottleneck. Team must identify and fix the bottleneck.
 - Effective in R&D setting. Avoids a deadline-based approach. Deadlines are dealt with in a different way.
- Provides a board for viewing and managing issues
- Can be applied to any existing software project immediately!

Basic Kanban

Backlog	Ready	In Progress	Done
 Any task idea 	• Task +	 Task you are working on 	 Completed
• Trim	description of	right now.	tasks.
occasionally	how to do it.	 The only kanban rule: 	 Record of your
 Source for 	 Could be pulled 	Can have only so many	life activities.
other columns	when slot	"In Progress" tasks.	 Rate of
	opens.	 Limit is based on 	completion is
	 Typically comes 	experience, calibration.	your "velocity".
	from backlog.	 Key: Work is pulled. 	
		You are in charge!	

Notes:

- Ready column is not strictly required, sometimes called "Selected for development".
- Other common column: In Review
- Can be creative with columns:
 - Waiting on Advisor Confirmation.
 - Tasks I won't do.

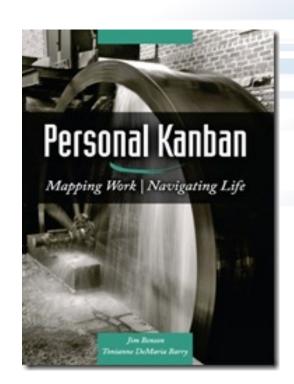

Personal Kanban

- Personal Kanban: Kanban applied to one person.
 - Apply Kanban principles to your life.
 - Fully adaptable.

- Personal Kanban: Commercial book/website.
 - Useful, but not necessary.

http://www.personalkanban.com

Kanban tools

- Wall, whiteboard, blackboard: Basic approach.
- Software, cloud-based:
 - -Trello, JIRA, GitHub Issues.
 - Many more.
- I use Trello (browser, iPhone, iPad).
 - -Can add, view, update, anytime, anywhere.

Big question: How many tasks?

- Personal question.
- Approach: Start with 2 or 3. See how it goes.
- Use a freeway traffic analogy:
 - Does traffic flow best when fully packed? No.
 - Same thing with your effectiveness.
- Spend time consulting board regularly.
 - Brings focus.
 - Enables reflection, retrospection.
 - Use slack time effectively.
 - When you get out of the habit, start up again.

Importance of "In Progress" concept for you

- Junior community members:
 - -Less control over task.
 - -Given by supervisor.
- In Progress column: Protects you.
 - If asked to take on another task, respond:
 - Is this important enough to become less efficient?
 - Sometimes it is.

Key Team Management Elements

Checklists:

Initiation, Transition, Exit

Policies:

How team conducts its work

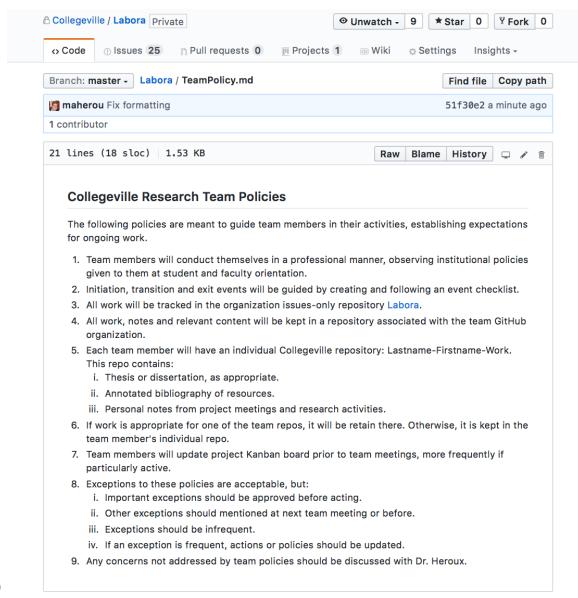

Issue tracking system:

- All work tracked, visible to team
- Milestones: Aggregate related issues.
- Kanban board
- Regular meetings, updates

Neil Lindquist Initiation Checklist #17

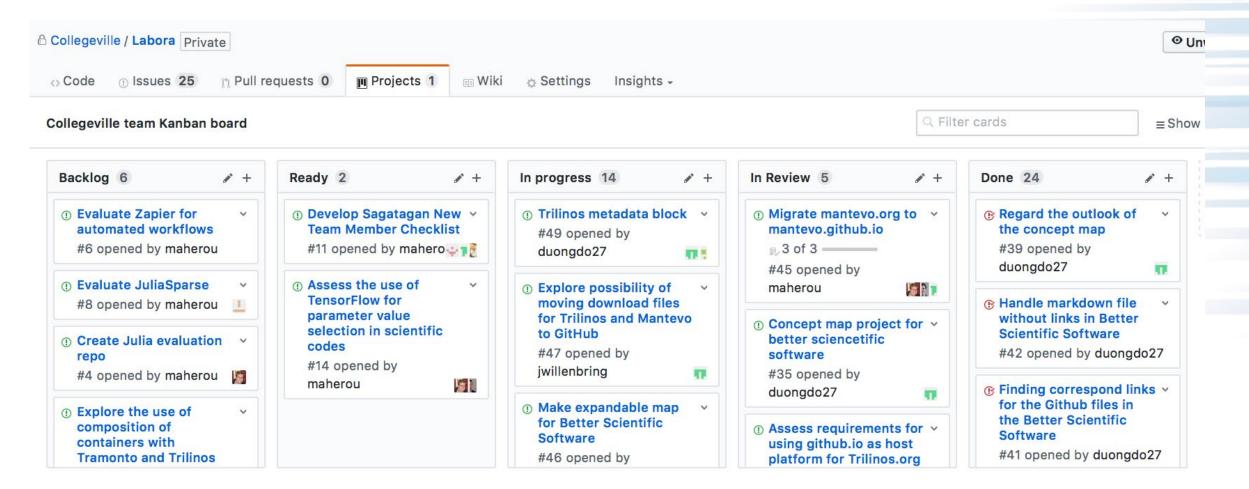

© Closed maherou opened this issue on Mar 31 · 0 comments

maherou commented on Mar 31 • edited by neil-lindquist This is the initial checklist for Neil's initiation into the Collegeville research project: add you to the Collegeville organization. ☑ Become a member of all appropriate repositories in the Collegeville organization. ☑ Identify any new repos that should be created, especially if your research topic is new. Learn LaTeX using the https://github.com/Collegeville/Scribe repository. At least one of your repos will be a LaTeX collection that will contain your annotated bibliography and the starting point for at least one technical report, which will be an ongoing record of your progress. Sign up for a Udacity online learning account at https://www.udacity.com, if you don't have one already. You will use Udacity for some of your introductory training. Take the Udacity course Software Development Proces at https://classroom.udacity.com/courses/ud805. Take the Udacity course How to Use Git and GitHub at https://classroom.udacity.com/courses/ud775. ▼ Take the online courses in C++: http://www.cprogramming.com/tutorial/c++-tutorial.html and http://www.cplusplus.com/doc/tutorial ✓ Redo CS200 lab exercises in C++ 1 maherou assigned maherou and neil-lindguist on Mar 31

naherou added this to the Neil Lindquist Initiation milestone on Mar 31 maherou added to Ready in Collegeville team Kanban board on Mar 31 maherou moved from Ready to In progress in Collegeville team Kanban board on May 15 - noil lindquist mound from in progress to Dane in Callegoville team

Samples from Collegeville Org: Kanban Board

Team Management Example

Team Policy

Checklists

Kanban Board

Step 1: Create Issues-only GitHub repo

- Go to https://github.com/username
 - Example: https://github.com/maherou
- Create new repo:
 - Click on "+" (upper right).
 - Select New repository...
 - Give repo a name, e.g., Issues
 - Select Public. In real life, this repo is often private (requires \$ or special status)
 - Init with README.
 - Don't add .gitignore or license.
 - Click Create Repository.

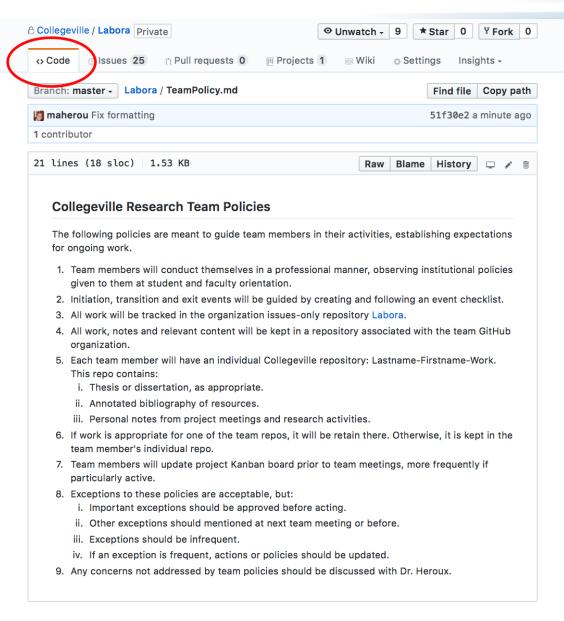

Step 2: Define Team Policy

Create file:

- Go to new repo: Issues.
- Select <> Code tab.
- Select Create new file TeamPolicy.md
- Questions to address:
 - How members support team?
 - How team supports members?
- Community version:
 - http://contributor-covenant.org
- Policy is living document:
 - Informal good practices added.
 - Avoidable bad situations addressed.

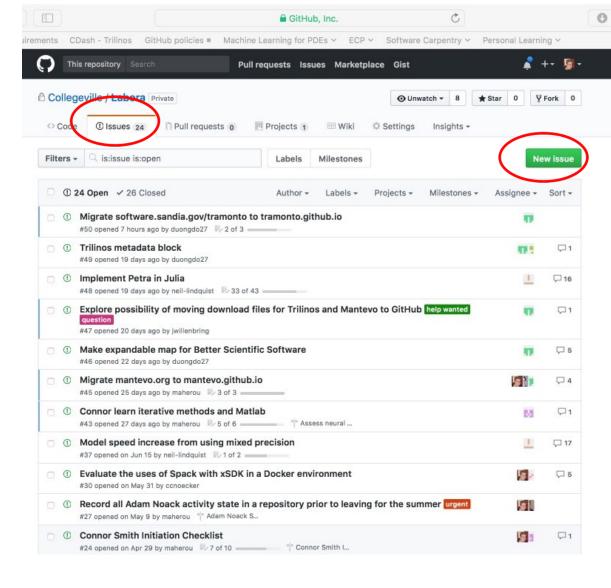

Step 3a: Create Issues

- Select the Issues tab.
- Click on New Issue.
- Type in task statement 1 (from list).
 - Type in title only.
- Click Submit new issue
- Repeat.

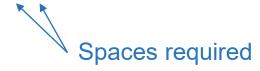

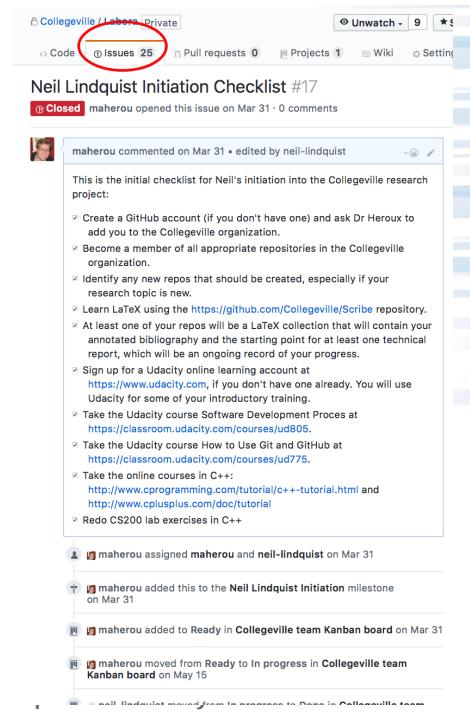

Step 3b: Create Initiation Checklist

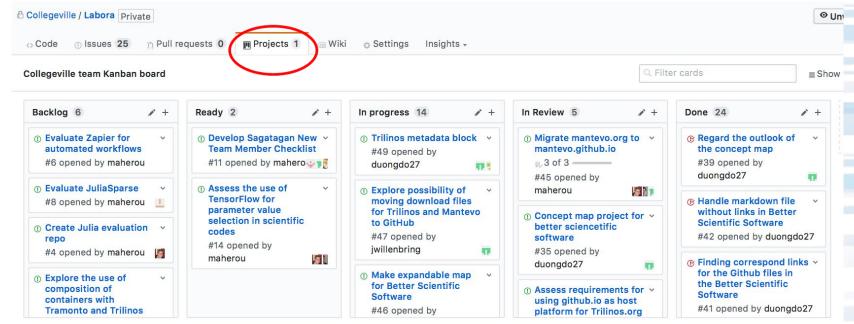

- Select the Issues tab.
- Click on New Issue.
- Select a classmate.
- Type in title: Pat Evans Initiation Checklist
- Add checklist items:
 - Use syntax:
 - -[] Description

Step 4: Create Kanban Board

- Select Projects tab
- Click New Project
- Use title
 - Team Kanban board
- Add these columns:
 - Backlog, Ready, In progress,
- Click on +Add cards (upper right).
 - Move each issue to the proper Kanban column

Next Steps: Real Life

- Create a GitHub Org and set of repos for your team:
 - Each team member has an individual repo.
 - Each project has a repo.
 - One special repo for issues.
- Track all work:
 - Use checklists for initiation, exit, any big new effort.
 - Create Kanban board. Keep it current.
 - Aggregate related issues using milestones.
- Drive meetings using Kanban board.
- Adapt this approach to meet your needs.
- When you start to get sloppy, get back on track.
